

# Lunar Hunt & Fish Owner's Manual

For centuries man has known about the effects of the moon on fish and wildlife activity. Through this method, Lunar Hunt & Fish accurately determines the best times of the day to hunt and fish, greatly increasing your chances of success.

## How to Operate the Application

### Step 1 - Selecting a Location

Lunar Hunt & Fish offer two methods for determining the point of reference for you hunting or fishing trip. You can either choose to use the phone's current GPS location (Current Location) or you can enter the zip code (Other Zip Code).

#### Select Time Zone and Daylight Savings:

When using the application's "Current Location" option, you will not have to enter the "Time Zone" or "Daylight Savings". These are automatically calculated for you.

When using the "Other Zip Code" option, you will have to select the appropriate "Time Zone" and whether or not "Daylight Savings" is currently in effect.

### Step 2 – Selecting Trip Dates

The next step involves setting the range of dates that you plan to go hunting or fishing on. First select the "Starting Date" and use the scroll wheel to enter the month, day and year. Then select the "Ending Date" and enter the ending date of your trip. For single day results you can enter the same date for both Starting and Ending dates.

### Step 3 – Calculate Optimal Hunting/Fishing Times

Simply click the button "Get Best Times" to view the optimal hunt/fish time results.
